Here is a ready-to-paste master prompt for *Lovable / Bolt / v0 / Opencode* to build your app. I included all your rules:

PROMPT TO PASTE:

Build a full-stack Web App + iOS/Android responsive PWA called *MedLocum - Medical Freelance Marketplace*.

CONCEPT:
A two-sided marketplace for medical professionals. Type A: Freelance Medical Professionals (doctors, nurses, specialists, etc) who create profiles with certifications and set availability + daily rate. Type B: Hirers (Doctor Practices, Clinics, Hospitals) who load funds into an in-app wallet and book professionals for 1 day or multiple days. A user can be Type A, Type B, or BOTH. Toggle this during sign-up.

CORE RULES - MUST FOLLOW:
1. NO profile images for now. Use initials avatar only.
2. NO in-app chat. Only hire notifications with time slots, km distance (NOT full address until hired), and address after acceptance.
3. Show distance in KM away, not full address on browsing/search.
4. Hirer loads funds into APP WALLET before booking.
5. Payment flow is ESCROW: Funds deducted from hirer wallet at booking -> held in escrow -> released to hired professional 5-10 days AFTER job completion -> then reflects in their wallet/ bank.
6. Hired professional sets their own rate per day.

USER ROLES & SIGNUP:
- On signup, user selects: `I want to get hired / I want to hire / Both`
- If `Get Hired`: Must fill Education, Certifications (upload PDF proof - license number, degree, specialty, council registration), Years of Experience, Skills, Daily Rate (ZAR), Availability Calendar.

- If `Hire`: Must fill Practice/Hospital Name, Practice Type, Registration Number, Contact Person.
- If `Both`: Both forms.

FEATURES:

A. For Freelancer (Get Hired):
- Dashboard: Upcoming Jobs, Earnings (Wallet Balance, Escrow Pending, Paid History), Availability Calendar (mark available/unavailable dates)
- Set Daily Rate, Set Available Days/Hours, Set Max Distance willing to travel (km)
- Profile: Education details, Certifications list (verified badge pending), Specialties
- When Hired: Receives PUSH + IN-APP notification: "Dr. X Practice wants to hire you for [Date Start - Date End] - [Time Slot] - 12km away". Two predefined reply buttons ONLY: `[Available - Accept]` / `[Not Available - Decline]`. No typing.
- After job, mark job as complete.

B. For Hirer (Hospitals/Practices):
- Dashboard: My Bookings, Wallet Management,

Hire History, Spending.
- Wallet: Add Funds via Paystack/PayFast (South Africa) - Card/EFT. Show balance. Payment Methods management.
- Search/Discover Freelancers: Filter by Profession (Doctor, Nurse, Dentist etc), Specialty, Availability Date Range, Rate per day (slider), Distance (km slider from my location), Certification.
- Card displays: Initials, Profession, Specialty, Certifications, Years Exp, Rate/Day, KM Away (e.g., 8.5km away), Availability dot (green)
- Click to view full profile (education, certs) - still NO address, only km away.
- Hire Flow: Select date range (1 day or multi-day) -> Select time slot -> System calculates Total = Rate x Days -> Check if Wallet has enough funds -> If not, prompt to load funds -> Confirm Booking -> Funds move to ESCROW.
- After booking, reveal full address of practice to hired pro only.

C. Booking & Escrow System:
- Booking Statuses: Pending Response -> Accepted (Escrow) -> In Progress -> Completed by Professional -> Pending Release (5-10 day

timer) -> Funds Released -> Closed
- Hirer can cancel BEFORE acceptance = instant refund to wallet.
- Admin panel can set release delay: 5-10 days.

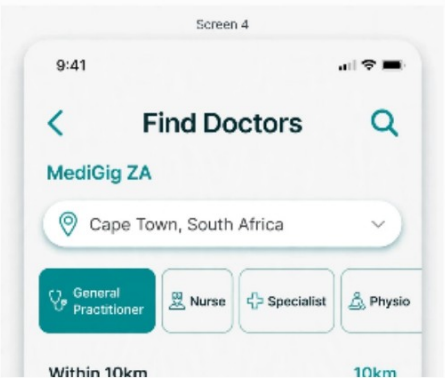

D. Other Dashboards:
- Both users: History, Payment Methods (for withdrawal/add), Notifications Center.
- Freelancer Withdrawal: Request withdrawal from wallet to bank account (Capture Bank Name, Account No, Branch Code).
- No chat system anywhere.

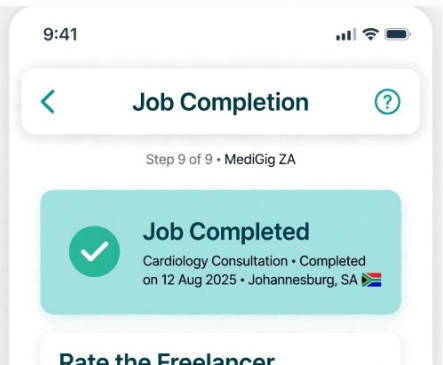

TECH STACK:
- Frontend: http://Next.js 14, Tailwind, Shadcn UI
- Backend: Supabase (Auth, Postgres DB, Storage for certification PDFs, Realtime for notifications)
- Payments: Wallet table (ledger system: credit/debit/escrow_hold/escrow_release). Integrate Paystack test mode.
- Location: Use browser geolocation + calculate distance with Haversine formula. Store lat/lng for all users, but only display KM.
- Mobile: Fully responsive, PWA ready for iOS/Android install.

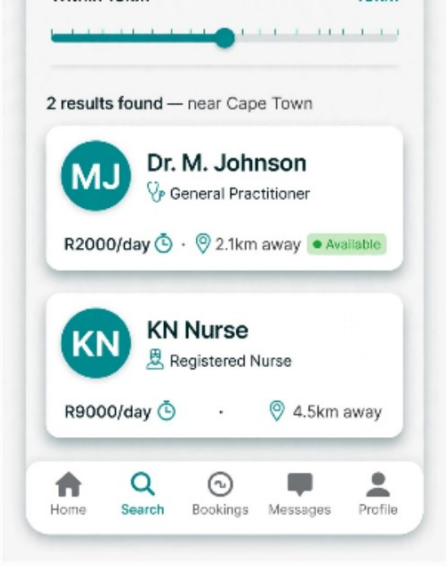

DATABASE TABLES:
users, profiles, education, certifications (with file_url), availability_slots, wallet, wallet_transactions, bookings, practice_profiles.

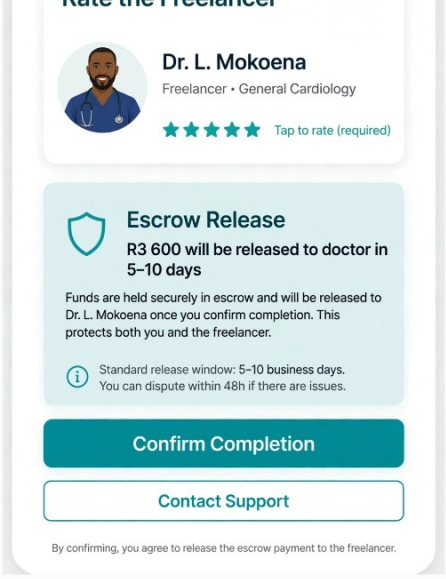

BUILD ORDER:
1. Auth + Role Selection
2. Profile Creation Forms (both types)
3. Availability & Rate Setting
4. Wallet System + Add Funds UI (mock)
5. Search with KM Distance Filter
6. Hire Notification System with Accept/Decline only
7. Booking + Escrow Logic + Dashboards

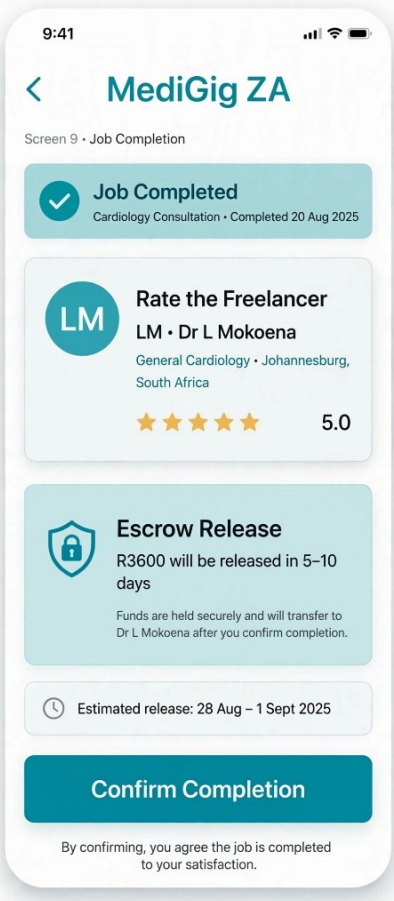

Design: Clean, medical professional, white/blue, trust-focused. No images.
